      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        80

-I- FUNCTION: ANTENNA COMPLEXES ARE LIGHT-HARVESTING SYSTEMS, WHICH TRANSFER THE EXCITATION ENERGY TO THE REACTION CENTERS.

-I- SUBUNIT: THE CORE COMPLEX IS FORMED BY DIFFERENT ALPHA AND BETA CHAINS, BINDING BACTERIOCHLOROPHYLL MOLECULES, AND ARRANGED MOST PROBABLY IN TETRAMERIC STRUCTURES DISPOSED AROUND THE

"Three regions of cauliflower mosaic virus strain W260 are involved in systemic infection of solanaceous hosts.";
Virology 190:773-782(1992).
-1- FUNCTION: THIS PROTEIN IS INVOLVED IN VIRUS TRANSMISSION.
-1- SIMILARITY: BELONGS TO THE CAULIMOVIRUSES ORF II FAMILY.
                                                                                                                                                                                                                                                                                                               This SWISS-PROT entry is copyright. pred. No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                     Score

Pred. No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, respectively. The proteins of the protein activity, and thromone regulating activity, chemotactic/chemokinetic activity, haemastatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter

Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein fragment referred to in the discolosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, schizophrenia, asthma, asthma, and allergies (disease), cognitive disorders, schizophrenia, asthma, and developmental abnormalities (disease).

Wang J,
Zhao QA,
                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotractic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2001-442253/47.

CC AADD8488-AADD8529 represent cDNAs corresponding to 18 human secreted CC protein genes, and AAED419-AAED4239 represent the proteins they encode. CC AAED4240-AAED4297 represent human secreted protein fragments or variants. CC The secreted proteins and their genes are useful for preventing. CC treating or ameliorating medical conditions, e.g., by protein or gene CC therapy. Pathological conditions can be diagnosed by determining the CC amount of the new genes. Specific uses are described for each of the CC and include developing products for the diagnosis or treatment of CC and include developing products for the diagnosis or treatment of CC and include developing products for the diagnosis or treatment of CC allers, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, CC parkinson's diseases (e.g., rheumatoid arthritis), inflammation, CC parkinson's diseases, cognitive disorders, schizophrenia, asthma, CC parkinson's diseases), cognitive disorders, schizophrenia, asthma, CC cardiovascular disorders, angiogenic disorders, kidney disorders, can also be used to aid wound disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin ageing due to culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

CC antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and cinmunosorbent assay (ELISA). The present sequence represents a human cc secreted protein fragment referred to in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                inflammation; allergy; neurological disorder; Alzhelmer's dise

                                                                                                                                                                                                                                                                                                                                                                                                 AAX40826 to AAX41093 represent 5' expressed sequence tags (ESTs) for human secreted proteins, and encode the proteins given in AAY01602 and AAY11294 to AAY12260, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell products. The proteins obtained may have cytokine activity by cell proliferation/differentiation activity, heemstopoiesis regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity or other activity. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into
                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acids encoding human secreted proteins - obtained cDNA libraries prepared from kidney, fetal kidney, dystrophic muscle, muscle and heart tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 34; Page 600-601; 622pp; English.

CC AAM25963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antiinflammatory; antirheumatic; cantiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; cc central nervous system; virucide; anti-HIV; fungicide; antimutagen; cc cardiovascular; antianemic; antiaggregant; haemostatic; vulnerary; cc cardiovascular; antianemic; antiaggregant; haemostatic; vulnerary; cc antidiabetic; cytostatic; neuroprotective; antidapressant; nootropic; cc antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; cc encoding them can be used in gene therapy, antisense therapy and vaccine production. The proteins and polynucleotides concoding them can be used in gene therapy, antisense therapy and vaccine cc encoding them can be used in gene therapy.

CC anotiparkinsonian; and immunostimulant. The proteins and polynucleotides concoding them can be used in gene therapy.

CC anotiparkinsonian; and polynucleotides are useful for screening for caponists or antagonists of a protein and for the treatment and diagnosis confidency, cardiac with the activity of a protein e.g. inflammation, cc inflammation, caponists of an anabylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, thrombocytopaenia, wounds, burns, ulcers, cardiac anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             rhinitis, asthma, diabetes, cancer, multiple sclerosis, depression, Alzheimer's disease, Parkinson's disease, neurodegenerative and neurological disorders.
The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypoptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypoptide or polypucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
